## Genotyping Protocol: MMRRC 31019

Assay Type: PCR- can distinguish heterozygous animals from homozygous animals
DNA Extraction: DNA from tail snips was extracted using Qiagen's DNeasy Blood and Tissue kit (Cat\# 69506). Kit directions for animal tissues were performed with a few minor modifications as follows: repeat AW1 and AW2 wash steps one time, elute in $200 \mu \mathrm{l}$ of AE buffer once.

Strain Description: This strain has a targeting vector which knocks-out the la exon, the entire switch region ( $\mathrm{S} \alpha$ ) and the 5 ' half of the constant region ( $\mathrm{C} \alpha$ ) of immunoglobulin heavy chain 2 (serum $\lg A$ ) gene (Igh-2) on Chromosome 12. Details can be found in Harriman et al (1999) J Immunol 162:2521-2529.
*This strain has an identical genetic alteration to M31020 - the two strains differ in the background strain.*
Current background strain: C57BL/6
